

Operation manual

ADESSO ESPRESSO with automatic milk frother

IMPORTANT

Operate the machine always with a filter descaler in it's water tank !

Preparation of hot milk or cappuccino

- Connect the automatic frother on the right side of the machine (fig. A) by pressing it onto the support
- Put the suction pipe in a container or directly into the bottle or brick with cold milk (fig. B, 1)
- Place a cup or glass with or without coffee under the frother
- Press the steam button (fig. C)
- Frothy milk will start coming out
- Adjust the density of the milk cream by turning and lifting the pin without taking it out (fig. B, 2)
- When you have enough milk press the steam button again to interrupt the flow of milk (fig. C). Please be aware that the milk flow will not be interrupted immediately.

Cleaning and maintenance

It is necessary to clean the frother frequently, at least once a day, and before any pause in use, in order to remove the milk !

Prepare a glass with water and insert the suction tube in the water (fig. D). Proceed like for the normal preparation of foamed milk and leave the water running through the cappuccino device in a glass or container positioned under the device for at least 10 to 15 seconds. Clean the pipe with a soft warmly damp cloth.

From time to time it is necessary to clean the frother more thoroughly taking it off the machine:

- Take off the cappuccino device by pulling it away from the machine (fig. A)
- Take off the lid (fig. E, 6), remove the pin (fig. E, 4) and the suction tube from the cappuccino device (fig. E, 5) and put everything into a container with warm water and neutral detergents for at least 2 hours, than clean milk traces with a brush
- Rinse everything under running water.
- Reassemble the pipe and the frother and place it back into it's position on the machine
